

Issue with Record Picker > Based on Report

I am experiencing a very odd issue that I'm hoping someone can give me direction on. This was working prior to today and nothing appears to have changed, so I'm a bit confused.

In the table **Laptop/Desktop Inventory**, I have created a custom report called **Computer is not assigned to an employee**.

A screenshot of the table looks as follows (only 3 records):

<input type="checkbox"/>	Inventory	Inventory Location	Hardware Name	Serial Number
<input type="checkbox"/>	Latitude 9876	San Francisco	H987654	S1234567
<input type="checkbox"/>	Latitude 7420	Nashville	NA-23L4KGN5Y2	4KGN5Y2
<input type="checkbox"/>	Latitude 7430	Irvine	OC-26LF8KXVV3	F8KXVV3

The logic behind this report includes one filter.

All of these conditions are true
Computer is Assigned? is not equal to checked.

▼ Filters

Initial Defines the results when the report is first displayed

Show all computer records Filter computer records

Show computer records where

all ▼ of these conditions are true

Computer is Assigned? ▼ is not equal to ▼ checked ▼

Computer is Assigned? is a checkbox summary field associated with the Parent Table – **Laptop/Desktop Inventory**. The child table in the relationship is the **Laptop Desktop Usage**.

 Laptop/Desktop Inventory
 Laptop Desktop Usage (Related Computer) ?

Parent Table - Laptop/Desktop Inventory		Child Table - Laptop Desktop Usage	
Field	Field Type	Field	Field Type
Record ID#	Record ID# (key field)	Related Computer	Numeric (reference)
Laptop Desktop Usage Record records	Report Link Del	Computer - Inventory	Text (reference proxy) Del
Add Laptop Desktop Usage Record	URL (formula) Del	Computer - Hardware Name	Text (lookup) Del
Computer is Assigned?	Checkbox (summary) Del	Computer - Serial Number	Text (lookup) Del
Add Summary Field		Computer - Inventory Location	Text (lookup) Del
		Computer - Warranty Expiration Date	Date (lookup) Del
		Add Lookup Fields	

When I create a new **Laptop Desktop Usage Record**, I'm presented with the **Add Laptop Desktop Usage Record Form**.

When I select the **Computer – Inventory dropdown** on this form, I'm presented with the results of the **Computer is not assigned to an employee** Table. I've set this up through the **Form Element Settings > Select using record picker > Based on Report > Computer is not assigned to an employee**.

Add Laptop Desktop Usage Record

Employee Name
Stu Lamden

Computer - Inventory
Search and select

3 choices found

Inventory Latitude	Inventory Location	Hardware Name
9876	San Francisco	H987654
7420	Nashville	NA-23L4KGN5Y2
7430	Irvine	OC-26LF8KXVV3

+ Create computer

So far so good!

Lets says I select the Latitude 9876 and Save.

Add Laptop Desktop Usage Record

Employee Name
Stu Lamden

Computer - Inventory
Latitude 9876

Computer - Hardware Name
H987654

Computer - Serial Number
S1234567

If I go back to the **Computer is not assigned to an employee** Table and refresh, you see that the table now only includes two records, which would be correct, since the Latitude 9876 is assigned to the employee Stu Lamden.

	Inventory	Inventory Location	Hardware Name	Serial Number
<input type="checkbox"/>	Latitude 7420	Nashville	NA-23L4KGN5Y2	4KGN5Y2
<input type="checkbox"/>	Latitude 7430	Irvine	OC-26LF8KXVV3	F8KXVV3

Now let's say I want to associate one of these other computers with Stu Lamden, so I once again launch the **Add Laptop Desktop Usage Record Form**.

The Computer – Inventory dropdown still lists the Latitude 9876 as a choice.

Computer - Inventory

Search and select

3 choices found

Inventory	Inventory Location	Hardware Name
Latitude 9876	San Francisco	H987654
Latitude 7420	Nashville	NA-23L4KGN5Y2
Latitude 7430	Irvine	OC-26LF8KXVV3

Create computer

But if I actually open the Computer is not assigned to an employee Table, as you can see above, the Latitude 9876 is correctly not included. The only way I can get the dropdown to be correct is by exiting from my app and re-opening. Only then does the dropdown show correctly and not include the Latitude 9876.

Employee Name

Stu Lamden

Computer - Inventory

Search and select

2 choices found

Inventory	Inventory Location	Hardware Name
Latitude 7420	Nashville	NA-23L4KGN5Y2
Latitude 7430	Irvine	OC-26LF8KXVV3

Create computer

Do you think this is a bug or am I doing something wrong?
